

LANA ALSHEIKH

778 – 846 – 9481 / laa65@sfu.ca / [LinkedIn](#) / [GitHub](#) / [Portfolio](#)

SKILLS

Languages: Python, C, C++, React, R, SQL, HTML, CSS, JavaScript, TypeScript (TSX), Tailwind CSS

Technologies: NumPy, Pandas, Matplotlib, Scikit-learn, Statsmodels, PyKalman, Tkinter

Tools: Git, GitHub, Docker, Figma, VS Code, PyCharm, Jupyter, RStudio, MATLAB, Excel, & Power BI

EXPERIENCE

Digital Risk & Resilience Analyst Co-op | Digital Risk & Cyber Security

Teck Resources – Vancouver, BC

Feb 2026 – Aug 2026

- Created and launched Cyber Pulse, a monthly cybersecurity awareness campaign delivering threat trends, security topics, and interactive activities to employees.
- Developed Power BI dashboards for leadership to track company-wide phishing simulation results, SAT metrics, departmental performance, and progress toward cybersecurity KPIs.
- Contributed to Business Impact Analysis (BIA) and enterprise resilience planning, assessing critical functions and recovery priorities
- Analyzed phishing results to identify behavioral patterns and recommended targeted security awareness training and advisories.

UX/UI & Website Development | MeAlvue - Riipen

MeAlvue – Riipen

Jan 2026 – Mar 2026

- Conducted UX/UI audit using Nielsen's heuristics, identifying usability gaps and system behavior issues
 - Designed a complete UI overhaul in Figma, improving usability and visual consistency
 - Redesigned the website to align with app branding, enhancing user experience and visual cohesion
-

PROJECTS

PenguinSteps

React, JavaScript, CSS, Figma | Website

- Built a senior-friendly web assistant that delivers step-by-step answers in plain language to everyday questions.
- Implemented a React-based conversational interface integrated with the OpenAI API to handle user input and response generation.
- Developed accessibility features including adjustable font size, brightness controls and voice-to-text input, earning the "Most Accessible" Award.

GenTraits

Python, Pandas, Scikit-learn, Seaborn, Matplotlib | GitHub

- Analyzed 316,000+ psychological survey records to study relationships between personality traits and gender.
 - Built a Python data pipeline to clean, preprocess, and structure raw survey data for statistical analysis and modeling.
 - Applied Random Forest and K-Means models to identify trait patterns and evaluate predictability, achieving 83% classification accuracy after reducing 44 traits to 2 composite scores.
-

EDUCATION

Bachelor of Science, Computer Science

Simon Fraser University, Burnaby, BC

Expected August 2027

- Minor in Statistics & AI Concentration
